

# Speech recognition for businesses **Dragon Professional v16**

## Premier speech-recognition for Windows 11 and 10.

Designed for knowledge workers and field employees in the private and public sectors, Dragon Professional v16 empowers professionals – whether sole practitioners or part of an enterprise – to create high-quality documentation faster and more efficiently, while saving time and money.

Today's professionals are challenged with creating outstanding documents. And if not completed correctly or efficiently, this can hamper report quality, employee productivity, and increase costs and compliance risks. Dragon Professional v16 empowers staff with a faster and more accurate way to create documents, spreadsheets, and presentations, or fill out form-based reports—in the office or on the road—all by voice. Use robust transcription tools to eliminate reliance on outsourced services. Or create and share powerful voice commands to shortcut repetitive, manual processes for additional productivity gains.

With Deep Learning technology, Dragon learns a single speaker's voice, achieving recognition accuracy unmatched by general-purpose speech recognition tools. This accuracy extends to users with accents or those working in open office or mobile environments. And for enterprise users, the Nuance Management Center easily deploys and centrally manages Dragon across the organization.

## Put your words to work – faster and smarter with professional grade dictation and transcription

### Speed and simplify document creation.

Don't let heavy documentation demands impact productivity, costs, or client service. Dictate documents 3 times faster than typing with 99% recognition accuracy, right from the first use. And since documents are created in a fraction of the time it would take by typing, less time is allocated to paperwork, and more time on profitable tasks.

### Streamline repetitive or manual processes.

Having to type repetitive content or perform multi-step tasks is a drain on productivity. With its powerful voice command capabilities, Dragon makes it easy to automate these tasks. For example, create custom voice commands to insert standard boilerplate text or signatures into documents. Or create timesaving macros to automate multi-step workflows by voice. Once created, they can be shared with other Dragon users within the enterprise or department.
